

Advantages of the Sikorsky Amphibion

1. Alights and takes off from either land or water.
2. Has two lateral engines and can be perfectly controlled on either land or water.
3. Can fly on either of its two engines.

These factors have enabled the Sikorsky Amphibion to immediately assume an outstanding position in inter-island transportation, provide the maximum of safety and convenience, and operate with relative freedom from either landing fields or water.

The value of being able to fly easily on one motor cannot be exaggerated, for it means that the Sikorsky Amphibion is able to reach its destination when a single-motored plane could not proceed. Thus forced landings because of engine trouble are minimized to the utmost degree.

Flights between the islands are over water, upon which the Sikorsky Amphibion may alight with perfect safety and from which it can take off easily and quickly. This gives the Amphibion an immeasurable advantage over the landplane in landing and contributes greatly to safety.

The unusual combination of safety elements which are inherent in the Sikorsky Amphibion on land, on water, and in flight, have rightfully caused this ship to be called "The World's Safest Airplane."

INTER-ISLAND AIRWAYS, LTD.
